MC4BSM is a series of workshops that was founded in 2006. Previous workshops have been held at FNAL, Princeton, CERN, UC Davis, the Niels Bohr Institute and Cornell. The workshop aims at bringing together theorists and experimentalists who develop, maintain or use Monte Carlo tools for the simulation of physics processes “Beyond the Standard Model” (BSM), mainly in the framework of highenergy collider physics. The emphasis is on data analysis and interpretation specifically at the Large Hadron Collider (LHC). The workshop series is also closely connected to the model-building community.

Organising Committee:

Christophe Grojean (ICREA/IFAE,CERN),
Konstantin Matchev (U Florida),
Maxim Perelstein (Cornell U), Jürgen Reuter (DESY, chair),
Thomas Schörner-Sadenius (DESY),
Peter Skands (CERN), Andreas Weiler (DESY)
